I've made many "purist" models (1 square, no cuts, no glue). This book is not a typical \*purist\* Origami book. There will be many sheets of paper, cutting, and gluing. That

being said, it's by far my favorite book (hardcover too!) for aircraft models, (and I have many of those too). All the aircraft in this book are models of REAL planes, no hokey fictional aircraft like Firewalker, Blue Raven or some other silly name the author decided to pull out of a hat, no, these are planes like the F-18, F-35, F-23, SU-27, F-14, Saab Viggen, F-15, E-2C, C-5 (really!) C-130, A-10, and even a P-47 Thunderbolt. When using a 8.5" x 11" paper, the models end up slightly larger than a 1/72 scale for the fighters, and about 1/100 for the cargo planes. The models are extremely well detailed, albeit comically with the large canopies and enlarged nosecones. There's instructions for accessories like missiles, bombs, trailing edges, winglets, intakes and exhausts. The bombs and missiles alone will take about 60% of the work, as the pieces are very small and need to be glued together. You could of course, leave them out, but what's an F-16 without the wingtip missiles? Realism is what we're trying to achieve here. All the plane parts are created with squares of scale size (1, 1/4, 1/16) that are folded from a variation of one fold (he calls them "kites") while making the models you'll have about 20-30 kites, all of varying sizes and slight differences to be glued together into a final product. Keep in mind, it's a "modeling" book and not a paper airplane book. None of them fly. I kept looking for instructions to make a stand for the models he has illustrated but he doesn't seem to have one. I would like to see a Volume II, as more aircraft would definitely be welcome. Planes like F-4, F-5, A-4 Skyhawk, A-7, A-6 Intruder, a few more centurion series like the F-100, and maybe even a WWII Volume. I'd definitely buy more of this type of book. 0 of 0 people found the following review helpful.
